

Module

- File
- Project Line=0
- Main
- Header
- Masks Maskn
- Slots 1

Slot Position

//###

su --command="/pvs"

Insert Function

Widget Names

When we are in pvdevelop
we select
File->new pvserver

Module

- File
- Project Line=1
- Main
- Header
- Masks Maskn
- Slots 1

Slot Position

//###

su --command="/pvs"

Insert Function

Widget Names

We now simply click OK

Create a new visualization

Directory: /home/lehrig/temp/pvbdemo

Name: pvs

Use Python

Cancel

Ok

We are now within the graphical editor of pvdevelop and can use the right mouse button to popup a menu

pvdevelop: InsertWidget

Insert a Widget

- PushButton
- TabWidget
- RadioButton
- GroupBox: Title
- CheckBox
- Frame: Shape/Shadow
- Label
- MultiLineEdit: editable
- LineEdit
- SpinBox: Min/Max/Step
- ComboBox
- Slider: Min/Max/Step
- Table
- LCDNumber: numDigit
- DateEdit
- Dial: Min/Max/Step/Value
- TimeEdit
- ProgressBar: totalSteps
- DateTimeEdit
- Image: imageFileName
- TextBrowser
- Draw/SVG: svgFileName
- ListView
- OpenGL
- QwtPlot
- QwtKnob
- QwtSlider
- IconView
- VTK
- ToolBox
- QwtCounter
- QwtWheel
- ListBox
- QwtThermo
- QwtCompass

You can insert the selected Widget again by: CTRL-MouseClick

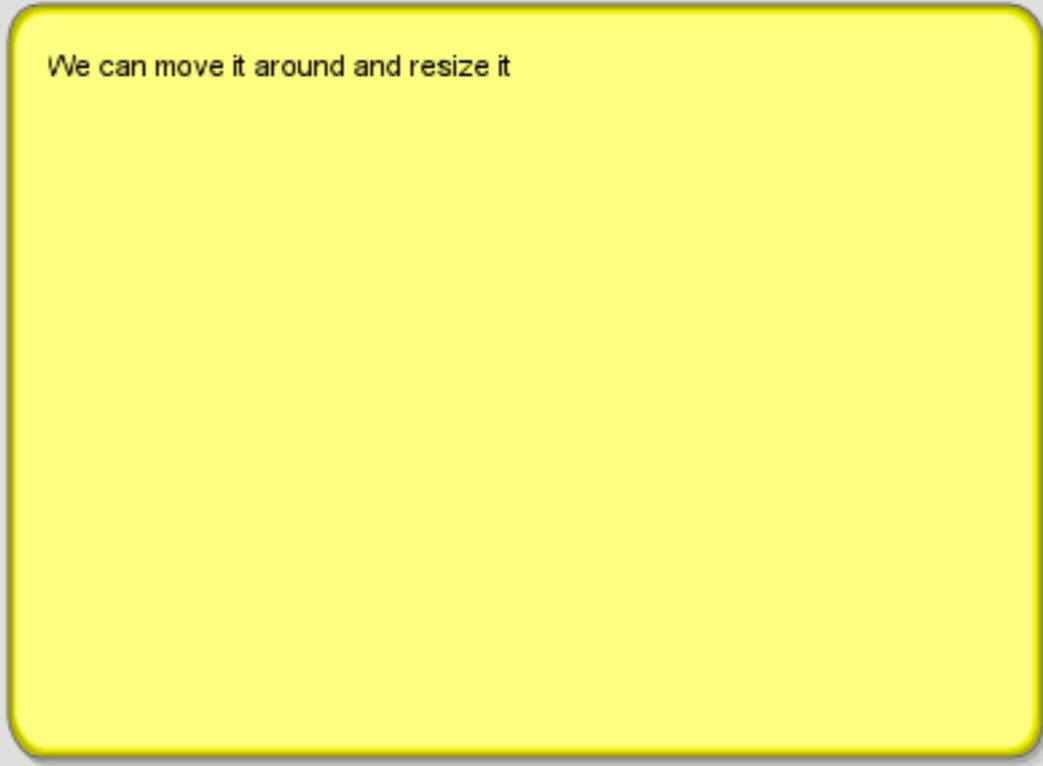

Cancel OK

We select "insert widget" and insert a PushButton

PushButton

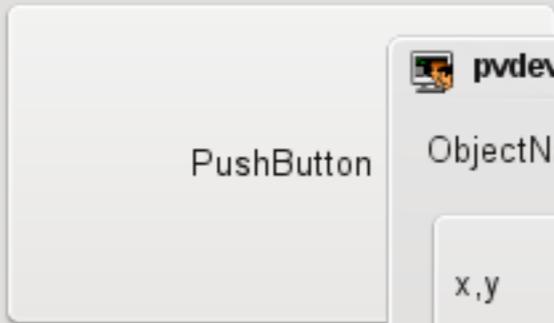

We can move it around and resize it

TQPushButton: objectName="obj1" tooltip="" whatsThis=""

Using a right mouse click on the PushButton we get the properties dialog

pvdevelop: Property Dialog

ObjectName: obj1

Geometry

x,y: 40 40

width,height: 210 125

Foreground (r,g,b): -1 -1 -1

Background (r,g,b): -1 -1 -1 **strikeout**

ToolTip:

WhatsThis:

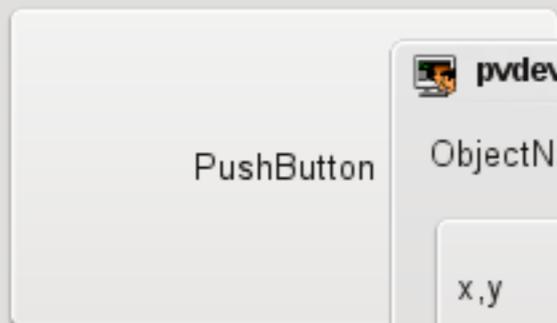

Text: PushButton

MinSize; Width/Height: 0 0

MaxSize; Width/Height: 99999 99999

TQPushButton: objectName="obj1" tooltip="" whatsThis=""

pvdevelop: Property Dialog

ObjectName: test_object

Font: default

size: 10

Geometry:

x,y	40	40
width,height	210	125

Foreground (r,g,b): -1 -1 -1

Background (r,g,b): -1 -1 -1

ToolTip:

WhatsThis:

Text: Hello

MinSize; Width/Height: 0 0

MaxSize; Width/Height: 99999 99999

OK

We modify the properties and click OK

Hello

For the moment this is enough

TQPushButton: objectName="obj1" tooltip="" whatsThis=""

Module

File

- Project Line=1
- Main
- Header
- Masks Maskn
- Slots 1

Slot Position

//###

su --command="/pvs"

Insert Function

```
#####
# generated by pvdevelop
#####

TEMPLATE = app
CONFIG    = warn_on_release
CONFIG    -= qt

# Input
HEADERS += pvapp.h
          mask1_slots.cpp

SOURCES += main.cpp
          mask1.cpp

!macx {
unix:LIBS      += /usr/lib/libpvsmt.so -pthread

```

When we switch back from designer to the editor
the whole framework for our pvserver will be generated

Module

- Project Line=1
- Main
- Header
- Masks Maskn
- Slots 1

Slot Position

su --command="/pvs"

Insert Function

Widget Names

Now our task is to fill out the "slot" functions
 The rest of the sourcecode was generated automatically.

```
//#####
//# mask1_slots.h fo
//# please fill out
//# here you find al
//# Yours: Lehrig So
//#####
// todo: uncomment m
// also uncomment th
// also remember to
//extern rlModbusCli
//extern rlSiemensTC
//extern rlPPIClient
                                ppi;

typedef struct // (todo: define your data structure here)
{
}
DATA;

static int slotInit(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    //memset(d,0,sizeof(DATA));
    return 0;
}

static int slotNullEvent(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
}
```

Module

Widget Names

test_object

```
DATA;

static int slotInit(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    //memset(d, 0, sizeof(DATA));
    return 0;
}

static int slotNullEvent(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    return 0;
}

static int slotButtonEvent(PARAM *p, int id, DATA *d)
{
    if (p == NULL || id == 0 || d == NULL) return -1;
    return 0;
}

static int slotBu... *d)
{
    if (p == NULL ||
    return 0;
}

static int slotBu... TA *d)
{
```

We want to handle a "ButtonEvent"
That is, when the user clicks our PushButton

Module

Widget Names

test_object

```

DATA;

static int slotInit(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    //memset(d, 0, sizeof(DATA));
    return 0;
}

static int slotNullEvent(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    return 0;
}

static int slotButtonEvent(PARAM *p, int id, DATA *d)
{
    if (p == NULL || id == 0 || d == NULL) return -1;
    if (id == test_object) pvPrintf(p, test_object, "World");
    return 0;
}

static int slotNullEvent(PARAM *p, DATA *d)
{
    if (p == NULL || d == NULL) return -1;
    return 0;
}

static int slotButtonEvent(PARAM *p, int id, DATA *d)
{
    if (p == NULL || id == 0 || d == NULL) return -1;
    if (id == test_object) pvPrintf(p, test_object, "World");
    return 0;
}

```

When the user clicks the PushButton we say "World"

```
pvs
g++ -c -m64 -pipe -O2 -fmessage-length=0 -O2 -Wall -D_FORTIFY_SOURCE=2 -fstack-protector -funwind-tables -fasynchronous-unwind-tables -g -Wall -W -I/usr/share/qt4/mkspecs/default -I. -I/opt/pvb/pvserver -o main.o main.cpp

Info: going to accept on port 5050
```

```
DATA *d)
return -1;
```

After selecting Action->start server the project is compiled and the server is started within a terminal

It will be waiting on it's default port for a user to connect with pvbrowser

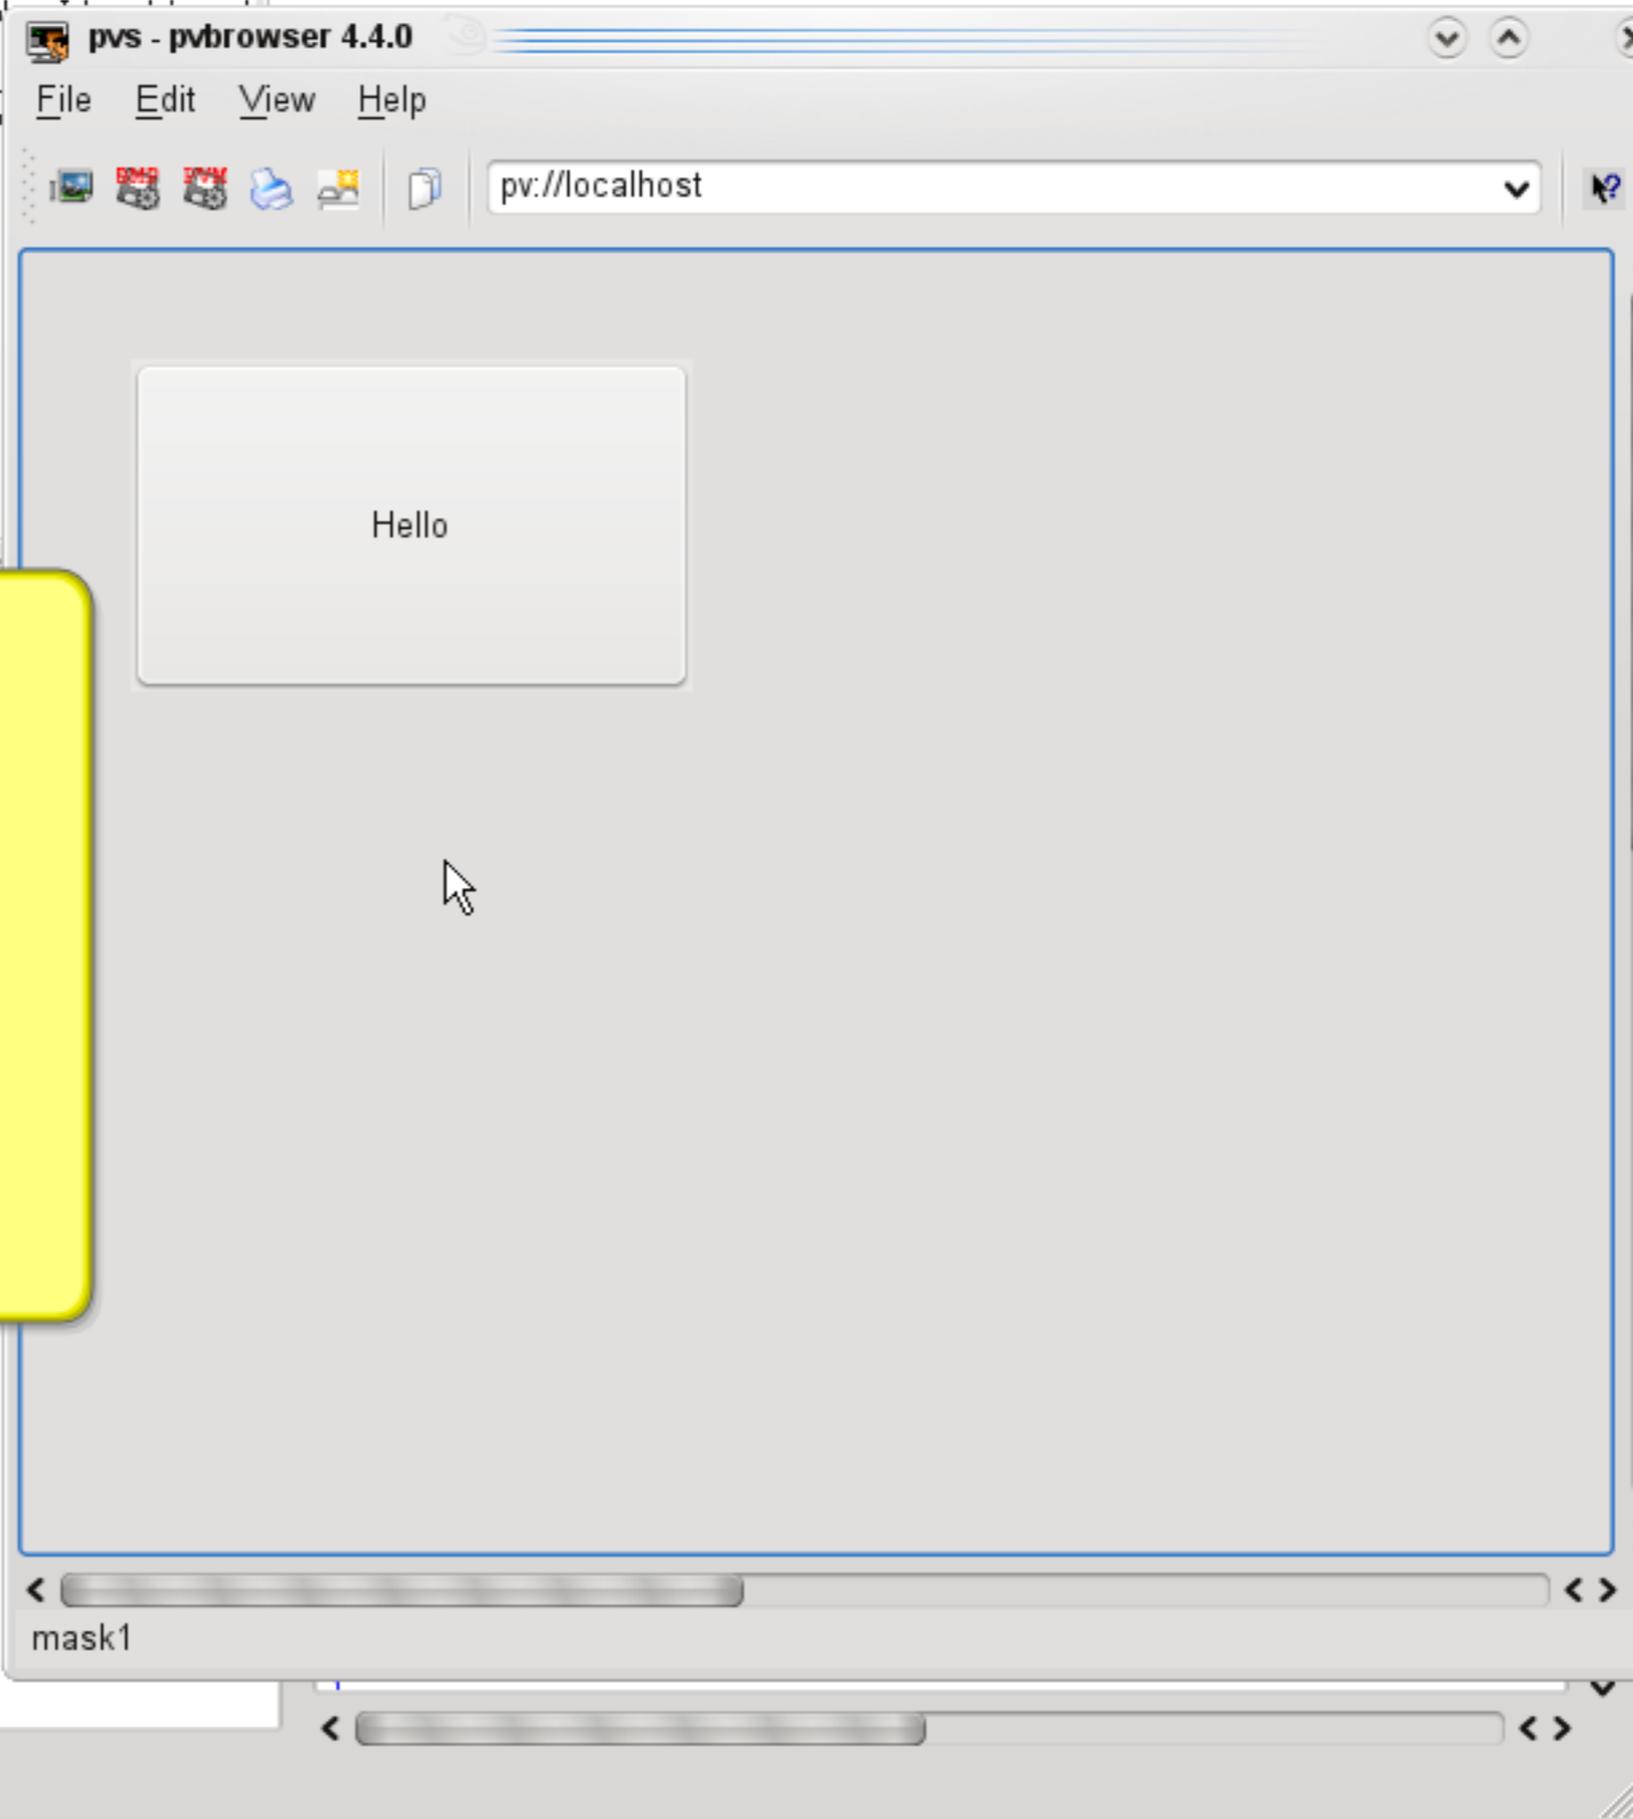

```
}

static int slotButtonPressedEvent(PARAM *p, int id, DATA *d)
{
    if (p == NULL || id == test_object) pvPrintI(p, test_object, "world");
    return 0;
}

static int slotButtonReleasedEvent(PARAM *p, int id, DATA *d)
{
    if (p == NULL || id == 0 || d == NULL) return -1;
    return 0;
}

static int slotButtonReleasedEvent(PARAM *p, int id, DATA *d)
```

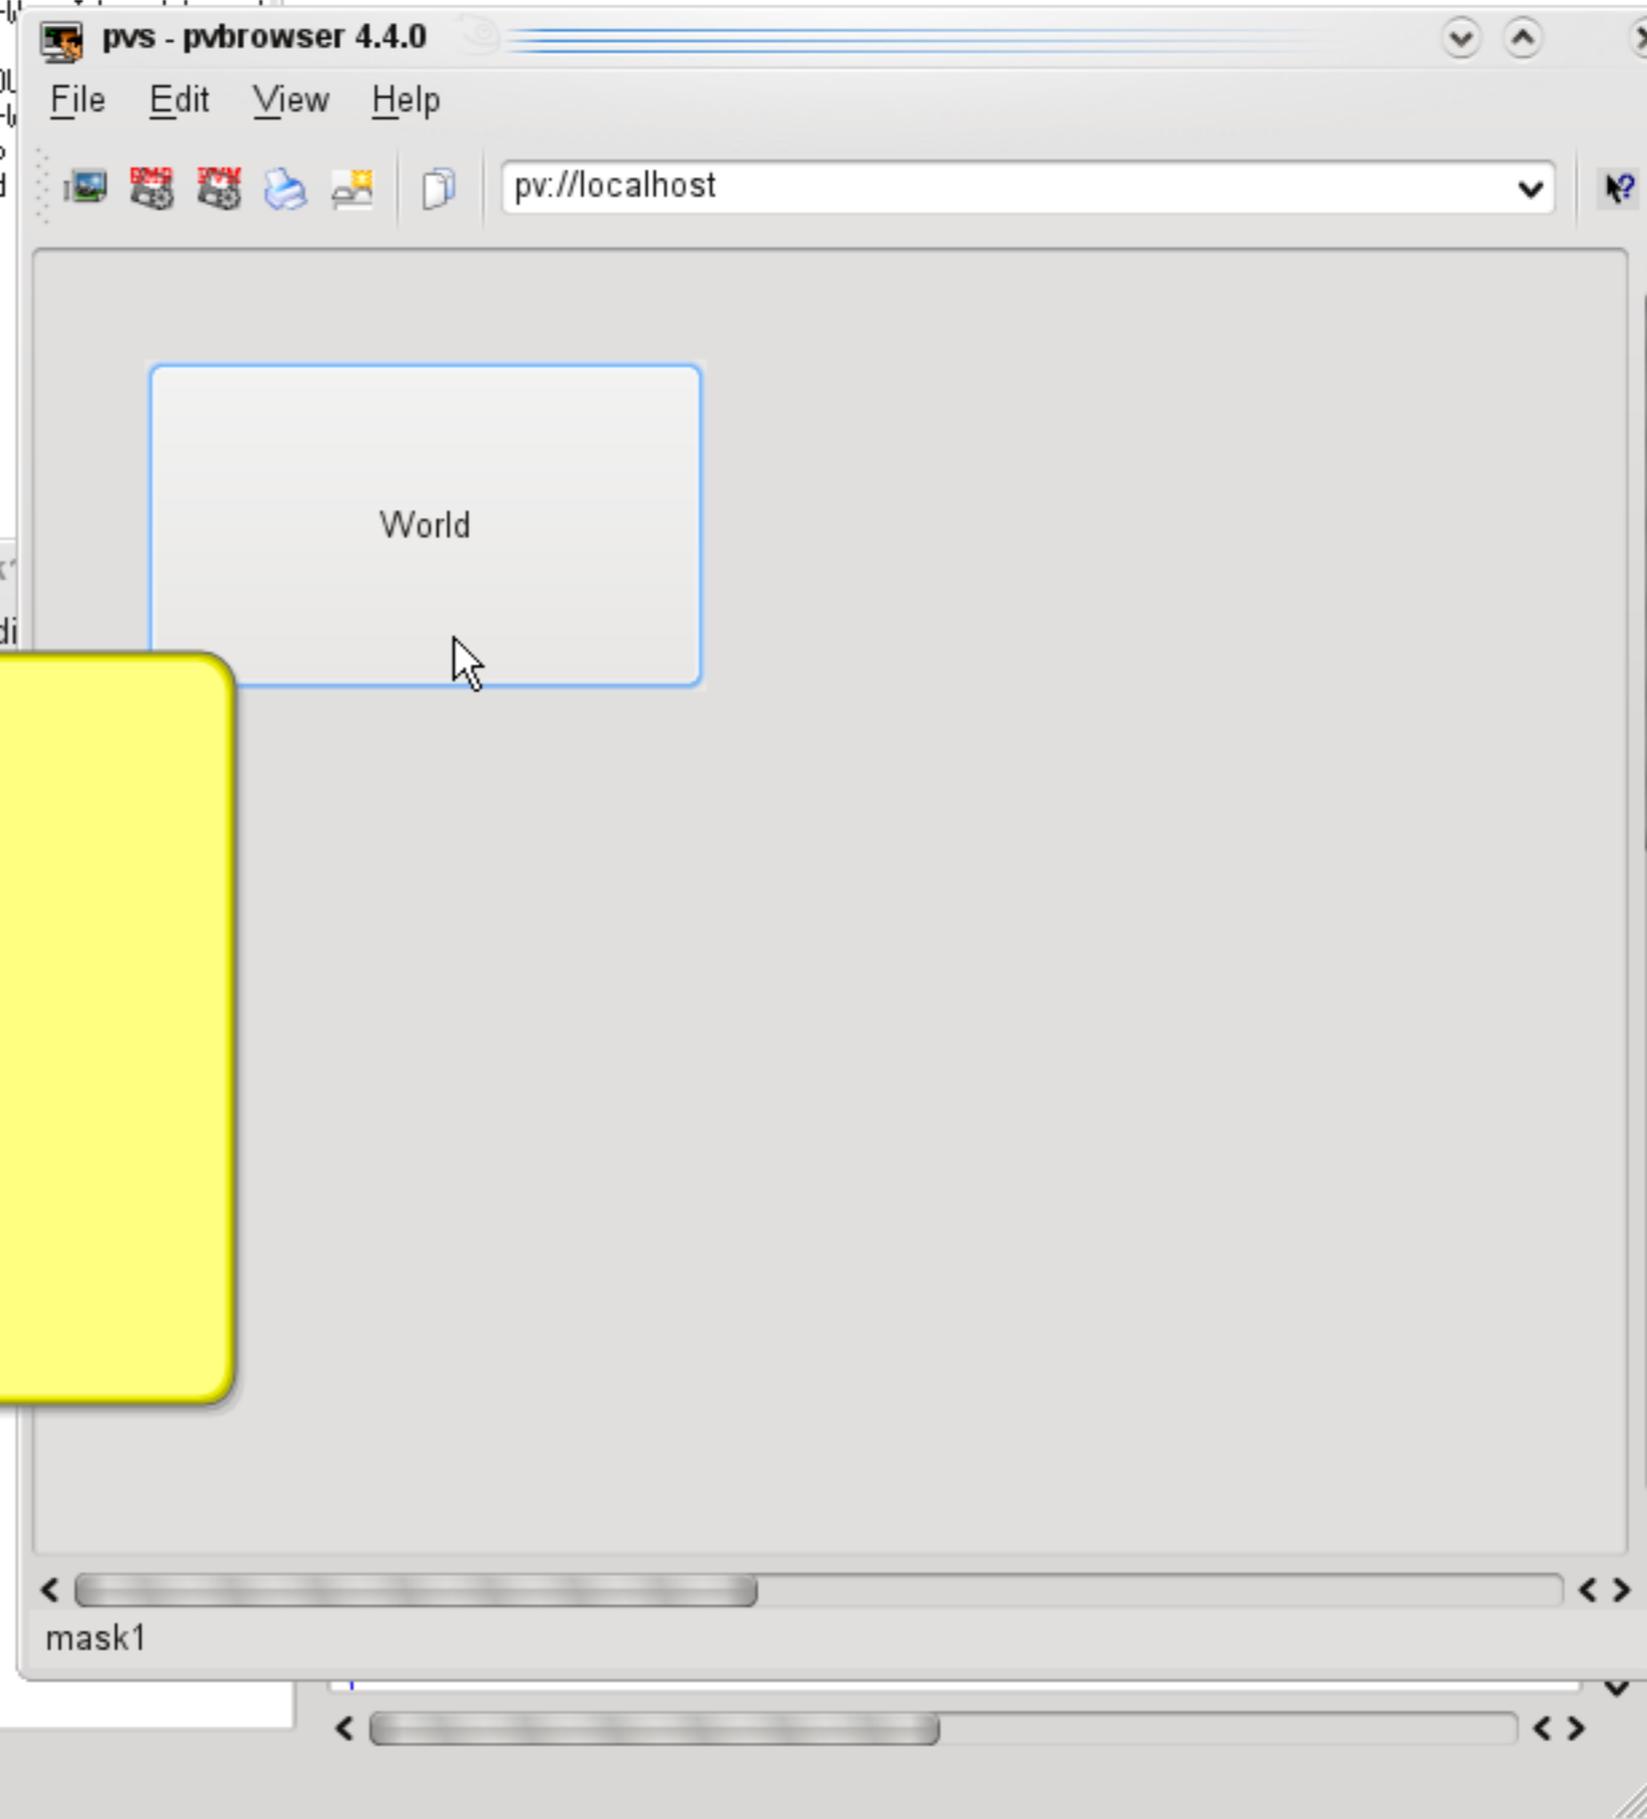

```
